

Inferential Statistics: Attitude Score vs. Actual Practices

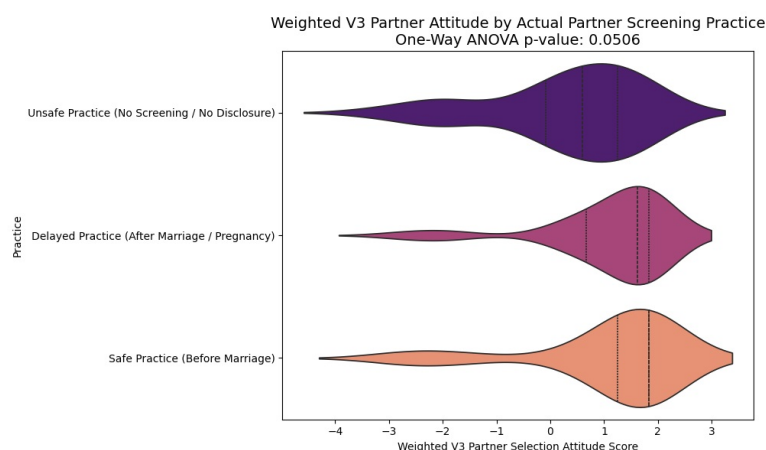

This report examines whether a participant's stated attitudes correlate with the actual actions they took regarding partner screening and family disclosure.

1. Partner Selection Attitude vs. Actual Partner Screening (ANOVA)

Testing if a positive attitude towards choosing a non-carrier partner resulted in safer screening practices in reality.

Behavioral Tier	N	Mean (Partner Attitude)	Std Dev
Unsafe Practice (No Screening / No Disclosure)	28	0.310	1.382
Delayed Practice (After Marriage / Pregnancy)	34	1.085	1.180
Safe Practice (Before Marriage)	21	1.045	1.429

- **F-Statistic:** 3.099
- **P-Value:** 0.0506
- **Conclusion:** Not Statistically Significant ($p > 0.05$). There is a disconnect between stated attitudes and actual behavior.

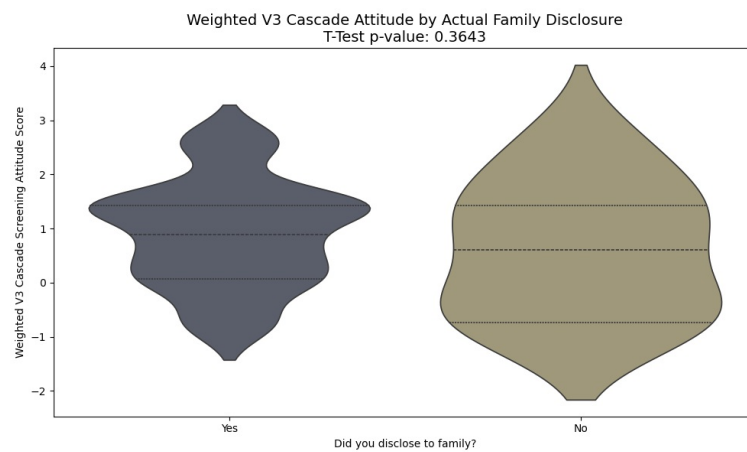

2. Cascade Screening Attitude vs. Actual Family Disclosure (T-Test)

Testing if a positive attitude regarding the necessity of family testing resulted in actually telling their family.

Disclosed to Family?	N	Mean (Cascade Attitude)	Std Dev
No	15	0.614	1.224
Yes	182	0.917	0.974

- **T-Statistic:** 0.935
- **P-Value:** 0.3643
- **Conclusion: Not Statistically Significant ($p > 0.05$).** Attitudes do not dictate disclosure behavior.
