

KAP Model Chi-Square Tests

Categorical Cutoff Analysis (Knowledge, Attitude, Practice)

We mapped the continuous scoring data into binary categorical brackets (e.g. “High” vs “Low”) to perform strict 2×2 Chi-Square tests of independence.

Cutoff Definitions (Median Split Approach)

- **Knowledge Cutoff:** 2.682
 - **Partner Attitude Cutoff:** 1.408
 - **Cascade Attitude Cutoff:** 0.886
 - **Partner Practice:** “Good” = Screened before marriage. “Poor” = Screened after/pregnancy or did not screen.
 - **Cascade Practice Cutoff:** Score > 1.0 = “Good Practice”, ≤ 1.0 = “Poor Practice”.
